Pete and Morgan

The buildings depicted in the pictures are indeed "The Antlers" condominiums. The units shown in the pictures are the lakeside units which run parallel to Antlers Ave (see the map) between Antlers Av. and the lake shore, directly adjacent to the small circular bay you see on the map (between the letters " LERS" in "ANTLERS AV" on the map, and the shoreline. Look just south of Cannon Point). The photos would have been taken from a boat at a point south west of the condominium location looking north/northwest.

The accompanying drawing you forwarded with locations, times etc is largely accurate...while I realize it is probably just hand drawn and not to scale..Diamond Island is in reality a bit farther North actually due west of a point between Cooper Point and Still Bay (see the JIMAPCO map)...also the campsite depicted is "Hearthstone"..not "Heartstone"

Hope this helps, let me know if I can be of any further assistance....JHS

Peter,

As discussed in the Technical Review, could you please assist me with the identification of the photos in this sequence. This will help us better establish the Mohican speed with a point beyond the accident, now

established at approximately 1454. I believe you said Joe Schneider may assist you, please give him my regards and thanks with this. In particular, how these buildings are situated on the shoreline, which will help determine the angle and placement on the map I have included.

7213-7238 The photos between 1451 and 1455.

Further, if you could provide the document--the operator manual from the 1980s you had with you Tuesday--the info about modifications, etc.

We need to identify, I believe it is the Antlers Hotel?
